Veterinary Certificate

Sale: Yearling Sale 2018 NZB Karaka New Zealand
Lot Number: 129
Horse: Tavistock, Crimson bay colt 2016
Brands n.sh: s inside C off.sh: 39 over 6
Pedigree as in the catalogue.

At the request of Jamie Walter of Proven Thoroughbreds a post-purchase veterinary examination of the above horse was undertaken at the New Zealand Bloodstock Karaka Sales Complex, New Zealand on 29/01/2018

Clinical Examination

The clinical examination included heart auscultation, ophthalmic eye examination, teeth examination, limb flexion and joint palpation which were normal. The sheath and testes were normal in appearance and the testes normal on palpation. There was no evidence of previous abdominal surgery, infection or disease, laminitis or ataxia. The horse was in very good health (condition score 3). The horse was examined at rest and at the walk only.

This was an attractive colt with nice length of rein and a good body. A good-size colt, (DOB 17/10/16), this horse was very slightly unlevel behind on occasional strides but there was no clinical abnormality found; the horse tracked up evenly and well, he showed an excellent stride length at the walk, turned well to both the left and the right in small tight circles and backed up normally. There was no pain on flexion or joint effusion on examination of the hind limb.

Radiographic Examination

The standard set of 36 radiographs was examined in the repository.
The radiographs show no significant radiographic changes.
Low risk.

In my opinion, at this time, the colt presented as suitable for purchase as a racehorse as can be determined from the examination performed as described. The horse is suitable for public syndication and mortality insurance.
