### Veterinary Certificate

**Sale:** Yearling Sale 2018 NZB Karaka New Zealand  
**Lot Number:** 630  
**Horse:** Ocean Park, Striker bay filly 2016  
**Brands** n.sh: HF conjoined off.sh: 89 over 6  
**Pedigree as in the catalogue.**

At the request of Jamie Walter of Proven Thoroughbreds a pre-purchase veterinary examination of the above horse was undertaken at the New Zealand Bloodstock Karaka Sales Complex, New Zealand on 31/01/2018

### Clinical Examination

The clinical examination included heart auscultation, ophthalmic eye examination, teeth examination, limb flexion and joint palpation which were normal.

The mammary glands and vulva were normal in appearance. There was no evidence of previous abdominal surgery, infection or disease, laminitis or ataxia. The horse was in very good health (condition score 3). The horse was examined at rest and at the walk only.

This was a medium to good-sized filly, up behind, with a good walk and level behind; she turned well to left and right in tight circles. This filly was a later foal (DOB 14.11.16) that looked to benefit from time.

### Radiographic Examination

The standard set of 36 radiographs was examined in the repository.

A lateral condyle sub-chondral cystic type lucency was faintly visible on the Right stifle. This had minimal sclerotic reaction and a good articular surface. This lesion had been monitored by the stud veterinarian and was reported to have improved since survey radiographs were taken in mid-2017. Low-medium risk.

Time given will be beneficial in minimising the likelihood of any clinical effects associated with this type of radiographic change.

In my opinion, at this time, the filly presented as suitable for purchase as a racehorse as can be determined from the examination performed as described.

The filly is suitable for public syndication and mortality insurance.
